Product range

Very often customers ask us, why at all we design and produce striking plates.

The answer is simple: Because we can! And as everything we do, is accomplished with devotion, we can do it very well! This is the reason why we have striking plates in our portfolio, without offering suitable locks.

Following the motto: The lock manufacturers provide good locks – BaSys completes these locks with suitable and innovative striking plates.

One striking plate seldom comes alone...

Especially for frame manufacturers who offer a great variety of models, one striking plate is not enough. Quite the contrary. A plurality of striking plate models is necessary for:

- The standard frame with a standard wooden door leaf
- The standard frame with a glass door leaf
- The standard frame for increased requirements (e.g. apartment entrance door)
- The frame for functional requirements (e.g. fire protection, burglary protection)
- The frame for additional applications (e.g. electric opener or magnetic locks)
- The different frame geometries (flush, rebated)
- Frames for different product lines (e.g. adjustable striking plate for high-quality door elements)

In order to cover such a wide variety, we consequently follow a system approach. Within one striking plate system we offer utmost compatibility and combinability of the individual models. We try to keep it as simple as possible for our customers:

- Same cut-out and frame preparation for striking plates with different features (e.g. light striking plate, solid striking plate, adjustable striking plate)
- Same fixing accessories for striking plates with different features
- Consistent finishes

This results in substantial advantages: Cost saving effects in your production and your warehouse. High flexibility to adopt to your customers' requests. Maximum substitutability – your customers can change the striking plate even on site, e.g. to build in a burglary protection striking plate or to resolve a claim with the help of an adjustable striking plate.

Of course we analyse our customers' production possibilities (e.g. feeding units, preparation of cut-outs etc.) prior to developing a specific striking plate system and try to consider these parameters as much as possible.

7 mm narrow

Exchangeability

BaSys strongly emphasizes on replaceability of striking plates with different functionality within one system: light against solid, normal against adjustable, normal against electric opener or bolt switch contact, etc... The exchangeable models are so diverse as the requirements on modern door elements.

Adjustability

BaSys offers for all common striking plate systems adjustable models which normally have an adjustment range of 3 mm in order to press the door leaf tightly to the sealing. In this context it is important to provide a well thought out adjustment mechanism which is produced in high quality materials. Following the system approach BaSys offers the adjustable models for the same cut-out as the non-adjustable versions.

Retrofit Sets

Due to the great compatibility within each striking plate system we are able to design so called retrofitting sets. The basic idea: The customer replaces on site the striking plate of the standard frame by a higher quality striking plate (e.g. an adjustable model). These retrofitting sets offer extra added value in your sales activities!

Finish

Other finishes available on request, e.g. PVD-coated

BaSys product world

From a single source

Made in Germany

Under this brand name we develop, produce and market the complete fittings range for well-known manufacturers in the German and European door and frame industry, as well as for international trade and industry customers. Alongside this main focus, our product

range is complemented by high quality furniture fittings and specially developed functional hinges, including for anti-burglary, fire protection and noise insulation applications.

PIVOTA® – Concealed hinge systems

OBJECTA® – Hinge systems for commercial property doors

STABILO® – Striking-plate systems

COMBICA® – Hinge systems for apartment doors

MASTERBAND – Hinge systems for front doors
